## **DETAILED ACTION**

1. Claims 1-54 are pending.

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-29 and 54, drawn to a network configuration entity to control a defined set of management functions in a secure network, classified in class 726, subclass 6.
- II. Claims 30-38, drawn to a method of securing a network including the steps of placing the network configuration entity in a secure physical location, classified in class 726, subclass 34.
- III. Claims 39-49, drawn to a method of securing a network including the steps of initiating password changes and limiting logical access to the network devices, classified in class 726, subclass 5.
- IV. Claims 50-53, drawn to a network switch, classified in class 370, subclass 401.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate

Art Unit: 2134

utility such as restricting access to management functions to a specific subset of MAC endpoints, invention II has separate utility such as providing physical security for a network switch, invention III has separate utility such as limiting logical access to network devices using a password, and invention IV has separate utility such as defining management procedures in the event a network switch becomes a member of a segmented portion of the network. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
